ENGINEERING LEADER & PLATFORM ARCHITECT

AI Platform Engineering | Enterprise Observability | Distributed Systems | Cloud Infrastructure

Enterprise engineering leader and hands-on architect with a proven track record of scaling core platforms through hyper-growth, driving revenue from \$50M to \$500M+. Expert in distributed systems, modern AI architectures, agentic workflows, and high-performance Kubernetes infrastructure. Blends battle-tested platform fundamentals with cutting-edge cloud-native innovation.

TECHNICAL SKILLS

- **AI & Developer Tooling:** Claude Code, Codex, Agentic AI Frameworks, Gemini Workflows.
- **Infrastructure:** AWS, Kubernetes, Docker, Systems Integration, Virtualization, Hybrid Cloud.
- **Programming Languages:** Go, Python, TypeScript, JavaScript, C, C++, Java, SQL.
- **Databases:** Neo4j (Graph DB), PostgreSQL, SQLite, InfluxDB, MongoDB, MySQL, Amazon RDS.
- **Frameworks & Runtimes:** FastAPI, Express, Node.js, REST APIs.

RECENT PROJECTS

Cintara TCP Observability Platform | *Go, Python, FastAPI, Neo4j (Graph), Kubernetes, Docker*

- Architected observability platform of Cintara's Trust Control Plane (TCP) which is an internal cluster platform utilizing Go binaries for high-performance Kubernetes container integration, metrics collection, and telemetry streaming.
- Engineered a Python/FastAPI state-machine backend integrating a Neo4j graph database to map service dependencies and calculate real-time health "blast-radius" visualizations.
- Designing automated remediation ("do") capabilities for upcoming release cycles to transition the platform from read-only monitoring to autonomous infrastructure healing.

Cintara Automated SOC2 Status Engine | *Python, FastAPI, Health APIs, Automated Incident Mgmt*

- Developed an automated compliance platform that queries 9 distinct Cintara Trust Control Plane microservices on a continuous 1-minute interval.
- Built live dashboards providing historical health reporting, audit-ready uptime tracking, and incident management workflows to fulfill automated SOC2 verification constraints.

Stream Service Mobile App | *TypeScript, Express, SQLite, Docker, Railway, Webhooks, iOS Native*

- Designed and built a full-stack media aggregation platform tracking global TV, film, and live sports streaming schedules using an asynchronous TypeScript/Express API.

- Implemented native iOS mobile features including haptic feedback layers, systemic share-sheet extensions, and high-frequency webhook notifications via Apple Push Notification service (APNs).

PROFESSIONAL EXPERIENCE

CINTARA | Remote | **Advisor, Enterprise Cloud & Platform Engineering** | February 2026 – Present

- **Agentic AI Infrastructure:** Architecting code and workflows for an Agentic AI Trust Control Plane PaaS offering on AWS, enabling enterprises to deploy AI agents with automated governance, audit trails, and strict policy guardrails.
- **Kubernetes Observability Backplane:** Designing and developing a production-grade container observability product using **Go** for high-performance cluster data plumbing and **Python/FastAPI** as the state machine and backend interface.
- **Security & Compliance Applications:** Built and deployed an enterprise SOC2 compliance status application utilizing **TypeScript and Express**, engineered to handle time-series service health logs with 90-day historical health reporting.
- **Tooling Integration:** Utilizing **Codex** and automated developer tools to accelerate full-stack deployment velocity and maintain robust system-level testing.

PERSONAL CAREER BREAK & TECHNICAL R&D | September 2023 – January 2026

- Executed self-directed research into modern AI architectures, vector databases, LLM orchestration, and cloud native scaling patterns while managing personal and family priorities.

OCIENT | Chicago, IL | **Engineering Manager** | October 2022 – August 2023

- Managed multiple engineering teams supporting core components of a hyperscale enterprise data warehouse product stack handling massive, complex workloads.
- Implemented predictable Scrum methodologies across engineering teams, significantly accelerating release cycle predictability and feature velocity.
- Directed performance optimization initiatives that successfully scaled the data warehouse infrastructure, directly enabling the sales team to close two critical enterprise accounts necessary to secure Series B extension funding.

YELLOWBRICK DATA | Mountain View, CA | **Founding Software Engineer (Stealth Mode – Employee #9)** | February 2016 – July 2022

- **Telemetry & Monitoring:** Joined as an early-stage startup engineer in stealth mode to design, build, and scale Yellowbrick's core real-time observability backplane from scratch, enabling real-time metrics collection, alerting, and telemetry.
- **Data Collection Systems:** Engineered a high-throughput Data Collection System to ingest log files, configurations, system metrics, and real-time query statistics across mass flash-memory storage architectures.

- **Hardware/Software Telemetry:** Designed and built the *Chassis Manager* runtime application, providing real-time hardware- and software-level health monitoring and proactive alerting for enterprise data warehouse deployments.
- **Distributed Services:** Developed *Phonehome*, a distributed REST application that securely streams appliance logs and health alerts into the central support platform, enabling proactive client troubleshooting.
- **Cloud Identity & APIs:** Implemented enterprise Single Sign-On (SSO) integrations and designed the core REST APIs powering the Cloud Data Warehouse Manager interface.

DXC (Formerly CSC / HPE Enterprise Services) | Falls Church, VA | **Director of Cloud Engineering** | October 2010 – February 2016

- Directed engineering strategies to pivot a legacy hosting business unit into a highly profitable private, public, and hybrid cloud service provider utilizing **AWS, Azure**, and VCE (VMware, Cisco, EMC) architecture stacks.
- Scaled the cloud service provider business unit from **\$50M per year to over \$500M in annual revenue** during tenure (now generating \$2B+ annually).
- Managed global budgets, concurrent architecture streams, and cross-functional, geographically dispersed systems engineering teams.

SURE SECURE SOLUTIONS | Director, Integration Solutions

FORTISPHERE (Acquired by Red Hat) | Director of Engineering

MANAGED OBJECTS / NOVELL (Employee #8 - Acquired by Novell) | VP of Engineering & Support

EDUCATION - JAMES MADISON UNIVERSITY | Computer Science
